

# The meeting of minds

## Our mission

"We strive to be a world-class provider of superior quality integrated services at the leading edge of technology, while providing our employees the opportunity to grow professionally."

## Trust HyperShell for:

- Professional services in design & drafting, engineering, and industrial software programming;
- Superior technical skills;
- A team renowned for its complementary expertise;
- A constant integration of new technology;
- Professional rigour in meeting commitments and deadlines;
- Success in accomplishing numerous major projects.

## Our vision of a promising future

**HyperShell is the result of an idea – vision of a group of professionals with complementary skills, when combined in a positive work environment unleashed previously unrecognized potential to create extraordinary new possibilities. In 1990, HyperShell was formed out of that vision, led by a computer-engineering specialist and a CAD/CAM engineer.**

Through the company's first years, HyperShell developed several industrial software applications, including High Productivity Management for AutoCAD (HPMCAD). We quickly became renowned for our highly specialized expertise and have since created custom software applications for some of the largest corporations in North America.

In 1995, while software firms were hiring management consultants, HyperShell distinguished itself by creating a multidisciplinary engineering department. This innovative market strategy gave us a profound understanding of the production processes – and a significant competitive advantage in serving our clients.

In subsequent years, HyperShell's Engineering and Software Groups perfected new productivity tools for the design and development of technical

drawings. Building on that success, the Design and Drafting Group was launched in 1997, earning itself an enviable share of the metal tooling and manufacturing market.

By 2008, HyperShell had over 80 employees, and continues to enjoy strong growth thanks to a wise blend of experienced professionals (some with over 30 years of accomplishments) and young graduates well versed in the latest techniques and technologies.

Complementary expertise remains central to the HyperShell culture. Our "meeting of minds" will ultimately reveal more unexplored avenues for improving client efficiency, while ensuring HyperShell's own growth for many years to come...
